

Excalibur™

Technologically Superior Ink

Water Based Additives

Aquafix System Self Curing Additive: The addition of Aquafix Self Curing Additive to Aquatex or Duratex Inks allows the inks to fully cure within 72 hours without heat curing. Large expensive dryers are not required! Although heat is not required prints may be run through any type of dryer to allow pieces to be stacked. The Aquafix System greatly increases production speed for large textile printers and there are no more washability issues.

Directions: Our highly versatile plastisol ink base for direct printing and for cold peel heat transfer printing. This ink has good opacity and a soft hand feel. Ideal for high speed automatics. Also available in a wide range of popular colors (500 Series - Plastisol Ink).

AQT 1010 Clear: Clear soft base used for extending or mixing colors. Ideal for all Color Tone pigments. AQT 1010 Clear contains all the necessary ingredients such as binders, etc. The perfect base system for 'spraying' or 'dipping' applications. Simply add pigment for color and extend with water. Use as needed.

AQT 2593 Low Crock: Used when more abrasion or rub off resistance is desired or more pigment concentrate is added. Add 15% of AQT2593 Low Crock to ink.

AQT 2594 Aqualife Retarder: Specially formulated retarder and lubricant. Prevents drying in the screen over long periods of time. Used for very fine mesh screens on long print runs without clogging or drying in. Add 5% retarder to ink.

AQT 2595 Thickener: For thickening water based inks. Ideal where minor viscosity adjustments are required. Use as needed.

AQT 2596 Softener: Add to Aquatex to improve softness. Ideal for terry cloth and children's sleepwear. Additions of up to 5% will produce a super soft hand.
